

Eliham Alejandro Peláez

Gameplay Programmer | Game Programmer | Game Designer | Technical Game Designer

Medellín, Colombia | elihampelaezgd@gmail.com | +57 322 292 1728

| GitHub | Portfolio | LinkedIn

Professional Summary

Game Design student and Gameplay Programmer with hands-on experience designing, programming, prototyping, and iterating gameplay systems and interactive experiences. Experienced in Unity and C, Unreal Editor for Fortnite (UEFN) and Verse, gameplay mechanics, player movement, game systems, AI, NPC systems, procedural systems, level design, multiplayer gameplay, progression systems, and technical design. Additional experience with Three.js, WebGPU, p5.js, real-time simulation, GPU computing, and interactive programming. Focused on gameplay programming, game programming, systems design, technical game design, rapid prototyping, debugging, playtesting, and player-focused development.

Core Competencies

Gameplay Programming, Game Programming, Gameplay Mechanics, Game Systems, Game Design, Systems Design, Level Design, Player Movement, Player Controllers, Player Interaction, Input Systems, Game State Management, Combat Systems, Enemy Systems, NPC Systems, Artificial Intelligence (AI), State Machines, Procedural Systems, Procedural Generation, Multiplayer Gameplay, Game Progression, Difficulty Scaling, Tools Programming, Technical Design, Rapid Prototyping, Playtesting, Debugging, Systems Integration

Technical Skills

Programming Languages: C, C#, Verse, JavaScript

Game Engines and Platforms: Unity, Unreal Editor for Fortnite (UEFN)

Gameplay Programming: Gameplay Programming, Game Programming, Gameplay Mechanics, Game Systems, Player Controllers, Player Movement, Input Systems, Player Interaction, Game State Management, Combat Systems, Enemy Systems, Progression Systems, Multiplayer Gameplay, Interactive Systems, Event-Driven Systems

Game Design: Game Design, Gameplay Design, Systems Design, Level Design, Game Mechanics, Game Progression, Difficulty Scaling, Combat Design, Technical Design, Player Experience, Game Flow, Rapid Prototyping, Playtesting, Iterative Design

AI and Procedural Systems: Artificial Intelligence (AI), NPC Systems, State Machines, Character State Management, Procedural Systems, Procedural Generation, Randomized Systems

Software Development: Object-Oriented Programming, Software Development, Debugging, Problem Solving, Systems Integration, Modular Systems, Version Control, Git, GitHub

Graphics and Simulation: Three.js, WebGPU, p5.js, GPU Computing, Particle Simulation, Real-Time Simulation, Procedural Systems

Development Tools: Visual Studio, Blender, Maya, Aseprite, Figma, Photoshop, Illustrator, Clip Studio Paint, Miro, Notion

Selected Projects

Nightfall

UEFN / Verse / Multiplayer Gameplay Programmer Game Designer

- Designed and programmed a cooperative, round-based zombie survival game using Unreal Editor for Fortnite (UEFN) and Verse.
- Developed gameplay systems including enemy and creature spawning, wave management, resources, perks, collectibles, interactive objectives, progression mechanics, and game-state logic.
- Connected multiple gameplay systems into a cooperative multiplayer gameplay loop focused on player progression, replayability, and increasing difficulty.
- Iterated on gameplay systems through prototyping, debugging, playtesting, and design iteration.

Tide and Tale

Unity / C# Gameplay Programmer

- Worked on a 3D platformer collectathon set inside a world of stories, where players use the power of water to defeat enemies, traverse the world, and uncover its mysteries.
- Contributed to gameplay programming, tools programming, level design, and systems integration using Unity and C#.
- Developed and integrated gameplay systems and development tools while supporting level design and the interaction between multiple game systems.

Cosmic Collision

Unity / C# Roguelike Game Designer Gameplay Programmer

- Designed and programmed a fast-paced space roguelike focused on movement-based combat, dash attacks, enemy encounters, and item-based player progression.
- Implemented physics-based player movement, dash-based combat, auto-aim targeting, modular enemy patterns, and sequential enemy spawning.

- Developed randomized encounters, dynamic difficulty scaling, event-driven room clearing, and player stat and upgrade systems.
- Integrated item systems and iterated on gameplay progression, combat design, and balancing.

Trial of the Gods

Unity / C / Global Game Jam 2026 Game Designer Gameplay Programmer

- Created a 3D action-platformer during Global Game Jam 2026 where players use divine masks to unlock movement abilities and overcome environmental challenges across an ancient temple.
- Developed gameplay systems and game architecture using Unity and C.
- Designed gameplay around movement abilities, environmental challenges, player progression, and exploration.

Devil’s Canteen

Unity / C / Global Game Jam 2024 Gameplay Programmer Game Designer

- Developed a walking simulator murder mystery inspired by Colombian folklore and the song “La Pelea con el Diablo” by Octavio Mesa.
- Developed data-driven NPC architecture using Scriptable Objects and shared character data systems.
- Implemented procedural NPC population, dynamic character state management, randomized devil and victim systems, and modular population management.
- Developed NPC interaction and dialogue systems, investigation mechanics, character death and win/lose states, and randomized NPC movement.

Dream Valley

Unity / C / Artificial Intelligence Gameplay Programmer Technical Designer

- Developed a first-person puzzle horror experience where players explore a mysterious house, uncover its story through scattered notes, and evade a hostile white ghoul.
- Worked on artificial intelligence (AI), state-machine architecture, modular gameplay systems, and technical design.
- Developed gameplay and systems programming using Unity and C.

Dreamy Bubbles

Unity / C / Global Game Jam 2025 Gameplay Programmer

- Developed a first-person puzzle game where players use bubbles to manipulate objects and solve environmental puzzles through synchronized interactions.
- Developed gameplay and systems programming using Unity and C.
- Designed interactive puzzle mechanics based on object manipulation and synchronized interactions.

Cognitive Overload

Unity / C Gameplay Programmer / Level Designer / Director

- Designed an experimental puzzle platformer demonstrating divided attention through four deliberately misaligned camera views.
- Implemented Rigidbody2D movement, variable jump, coyote time, jump buffering, and wall sliding.
- Designed levels around divided attention and intentionally difficult-to-read environments.
- Conducted player testing and iterative gameplay development while rapidly prototyping movement and platforming systems.

Go On!

Unity / C Gameplay Programmer

- Developed a bullet-hell platformer focused on responsive player movement, projectile systems, boss encounters, and fast-paced evasion.
- Implemented gameplay programming and player movement systems using Unity and C.
- Developed and iterated on gameplay mechanics for a fast-paced bullet-hell experience.

Other Coding Studies

Three.js / WebGPU / JavaScript / p5.js Programmer

- Developed programming and simulation studies exploring emergent behavior, procedural systems, physics, forces, and GPU-based particle simulations.
- Worked with Three.js, WebGPU, JavaScript, and p5.js for real-time simulation and interactive programming.
- Explored procedural generation, simulation, GPU computing, and particle systems as technical programming studies.

Education

Universidad Pontificia Bolivariana (UPB)

Expected February 2027 Engineering in Digital Design Entertainment

Additional Education

Epic Games UEFN Bootcamp	2026
EAFIT Game Development Summer Camp	2018
Atempo – Musical Introduction	2019
SENA – Human Resources	2021

Languages

Spanish: Native

English: Fluent (C1)
